Thermablock[®] – exterior thermal protection.

Acryloc is proud to introduce Thermablock Exterior Acrylic.

Thermablock Exterior Acrylic combines the convenience of a self-priming* water based acrylic with our Reflectacoat[®] Tint Pacs in a product that keeps exterior surfaces up to 8°C cooler than conventional paints.

This is not an idle claim –we have tested Thermablock Exterior Acrylic on wall surfaces in direct sunlight alongside market leading exterior acrylics.

The Thermablock Exterior Acrylic surface temperature is lower by up to 8°C.

Thermablock Exterior Acrylic is a high quality pure acrylic with a 15 year warranty against flaking, blistering or peeling. It provides a tough yet flexible finish and is available in Low Sheen and Satin finishes.

Like ordinary exterior acrylics, Thermablock Exterior Acrylic is suitable for exterior features such as pergolas, fences, decking and walls on a wide range of surfaces including timber, fibre-cement, bricks and masonry, Zinalume[®] and galvanised iron.

Thermablock Exterior Acrylic is self priming on most surfaces. *The exceptions are bare steel/wrought iron and galvanised iron within 1km of the sea.

Thermablock Exterior Acrylic is supplied as a two-component system consisting of Thermablock Base and a range of Reflectacoat Tint Pacs, the same Tint Pacs as used in our Roofcote Supa Cool. These contain special heat reflecting pigments to give the thermal performance.

The Tint Pac is added to the Base before use;
eg. 0.5L Tint Pac added to 4.5L of Base, 1L Tint Pac added to 9L of base.

Both the Thermablock Base and the Reflectacoat Tint Pacs are manufactured in our Adelaide factory.

Colours are as per our Exterior Colour Selector plus the new Colorbond[®] colours Evening Haze[®] and Loft[®], 50 colours in total.

Sizes are 5L, 10L & 15L.

Thermablock - great Aussie paint from good paint stores everywhere!
